hello@ramonclaudio.com

Product engineer in New York. Freelancing solo since 2013. Give me a real bug with the time to dig and I'll ship the fix. 56 PRs merged upstream to Expo, Convex, Bun, shadcn/ui, and others, every one came from hitting a wall in my own apps and chasing it down.

EXPERIENCE

Product Engineer · Independent

2013 to Present · Brooklyn, NY

- 56 PRs merged upstream across 12 repos: expo/expo (33), shadcn-ui/ui (5), get-convex/better-auth (5), better-auth (3), fumadocs (2), withastro/compiler-rs (2), plus bun, TanStack/db, napi-rs, App-Store-Connect-CLI, hermes, and react-native. 10 more open across 6 repos including 2 source fixes to facebook/hermes (object-accessor home object, class-in-finally var caching), 2 in oven-sh/bun (CI YAML fix, peer-dep lockfile determinism), and the hermes-engine podspec in react/react-native.
- Build and maintain convex-revenuecat (12,500+ npm downloads, listed on the Convex Components Directory), tanstack-cn (CLI scaffolder, ~1,250 downloads), create-claude (1,800+ downloads), and 7 other shipped npm packages, 22,000+ downloads across all of them.
- Maintain ramonclaudio/patches (68 patches for Bun, npm, pnpm, and Yarn) so my apps and other users ship the fix while upstream PRs are in review.
- 10,800+ GitHub contributions since Dec 2023 across 52 public repos (384 stars earned).
- 2018 to 2021 at This Is Not Art: built and maintained a custom Shopify storefront (Liquid) with anti-bot protections (velocity detection, duplicate-order blocking, URL gating) years before Shopify shipped native mitigation. Built internal tools: AR sculpture preview app, Instagram head-tracking game, inventory management, custom event registration with timeslot booking.
- 2013 to 2017 at Software Automation Services: designed and operated automation and monitoring infrastructure for the e-commerce sector, with hands-on application security research and API reverse-engineering. Shipped Python and JavaScript tooling, Chrome extensions, and related web services.

Selected merged PRs

- **better-auth/better-auth#9281**: ported `./instrumentation` to conditional exports after Convex's V8 isolate threw synchronously from `import()`. Verified by reading convex-backend's Rust isolate.
- **get-convex/better-auth**: 5 merged PRs including #323 (breaking migration to better-auth 1.6, five runtime breaks in one rebase), #218 (stale credentials after session expiry), and #267 (fetchAccessToken deduplication).
- **expo/expo#46714**: an internal SwiftUI font pin silently dropped font, dynamicTypeSize, and resizable on @expo/ui's Image. Rerouted through the modifier pipeline so SF Symbols scale with Dynamic Type.
- **withastro/compiler-rs#25 + napi-rs#3189**: root-caused the glibc incompatibility breaking Astro deploys on Vercel and Amazon Linux 2023: a zigbuild baseline in Astro's Rust compiler CI and a silent `--cross-compile` fallback in @napi-rs/cli. Shipped in @astrojs/compiler-rs@0.1.8.
- **expo/expo#45872**: `<Host modifiers={...}>` was a silent no-op on iOS: Swift never declared the field the TS side forwarded. One field plus one `.applyModifiers` chain restored the whole modifier surface.
- **expo/expo @expo/ui SwiftUI**: the rest of the surface: the SwiftUI Alert component, worklet-backed scrollPosition bindings, scroll anchors and snap paging, clipShape/mask, per-axis scaleEffect, textContentType, textInputAutocapitalization, Dynamic Type font, and the accessibility modifiers, plus the canary packaging fix and a fork-safety CI sweep.
- **shadcn-ui/ui**: 5 merged PRs including #10396 (TanStack Start dark mode guide, replacing 4 prior attempts), #9484 (ComponentsList Copy-Page fix), and #10337 (llms.txt audit of 97 URLs).

SELECTED PROJECTS

- **convex-revenuecat**: Convex component mirroring RevenueCat subscription state. Webhook and REST sync with lifecycle hooks for entitlement transitions. ~12,500 npm downloads, listed on the Convex Components Directory.
- **vexpo**: Expo SDK 56 + Convex + Better Auth + Resend starter paired with a CLI that runs the full 0-to-1. `create-vexpo` scaffolds the template, then `vexpo full` provisions Convex, Apple Developer / ASC, EAS, and Resend end-to-end: account auth, secrets, env mirroring, Sign In With Apple JWT signing with 90-day auto-rotation, EAS workflows, and more.
- **tanvex**: TanStack Start + Convex + Better Auth + Resend SaaS starter. SSR auth, email + OTP, rate-limited HTTP API, avatar uploads. Live demo at tanvex-demo.vercel.app.
- **dreamseeker**: goal-achievement app, RevenueCat Shipyard Hackathon 2026 submission. Expo SDK 56 canary + Convex + Better Auth + RevenueCat. Row-level security, rate-limited endpoints, input validation on every mutation.
- **uniwind-ui**: shadcn/ui for React Native. Copy-and-paste components built on Uniwind, iOS + Android + Web from one codebase. Live demo at uniwind-ui.vercel.app.

SKILLS

TypeScript, Node, Bun, React, React Native, Postgres, Redis, Python.

EDUCATION

B.S. Computer Science, Long Island University, 2016
